

Records ten times* faster, yet small and light enough for the palm of your hand! *compared to the HIOKI 8420-51 series

Personal Data Logger with Ten Isolated Channels

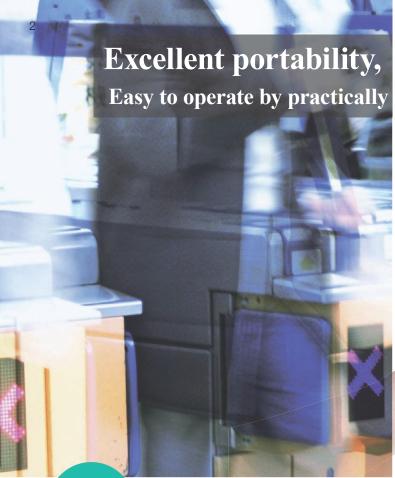

- **Provides ten** electrically isolated analog input channels for measuring voltage and temperature, plus four pulse-counting input channels. The isolated inputs alleviate constraints when measuring temperatures in live electrical circuits while minimizing interchannel interference.
- **10 ms scanning** of all channels provides rapid sampling capabilities

 To meet the demand for measuring sudden changes in load, this model tracks waveforms that earlier 100 ms models could not.
- **CompactFlash card** makes direct recording a snap For long-term data recording, transfer data to a PC via USB connection.
- **Widescreen, bright LCD** gives excellent viewability
 The beautiful, wide QVGA-TFT display is ideal for waveform monitoring.

Excellent portability, lightest weight in its class anyone, anywhere and at any time

Highlights

- Ultra-compact for convenient portability -
- Bright, easy-to-view wide LCD display -

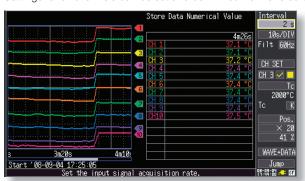

■ Most compact dimensions in its class

The handy size is easy to carry, and very lightweight. Just stuff it in the corner of your luggage, and you're ready to go. Sized at $176 \times 101 \times 41$ mm (WHD), and weighing in at only 550 g.

All-channel setting screen

Settings for all channels can be set and confirmed from one screen.

■ Most viewable display in its class

The easy-to-see, high-definition wide-screen QVGA-TFT LCD clearly displays trend graphs as well as numerical values. Waveforms and settings can be confirmed over a broad range, with up to 20 display divisions on the horizontal axis.

Individual channel setting screen

Easily select ranges and set display position while monitoring the waveform.

Monitor screen

View data in various layout combinations such as trend graphs, numerical values and vertical axis gauges.

- A variety of transducer outputs (DC voltage), or thermocouple measuring 10 ch
- 4 Pulse (count) Input Channels
- Alarm Output 1 Channel
- Real-time Save & Long-term recording to CF CardAll in a Single Compact Device

Terminal 2: Trigger Output

- Outputs a signal when triggering occurs
- · Use for synchronous parallel triggering of multiple HiLOGGERs

Pulse Inputs (measure integration/revolution count variations)

- · Four input channels
- Pulse inputs share common ground with the HiLOGGER
- · For measuring energy consumption and cumulative flow Note: Uses special HIOKI Input Cable 9641

Voltage/Temperature Measurement (using thermocouples)

Integration count 0 to 1000M (count) 0 to 5000/n (r/s) Rotation count

Terminal 3: External Trigger Input

- · Causes triggering when signaled by an external trigger source
- Use for synchronous parallel triggering of multiple HiLOGGERs

Terminal 4: Alarm Output

- · Outputs a signal when alarm criteria are satisfied
- The output signal shares common ground with the HiLOGGER
- · Use for simultaneous control of an external alarm device Note: Open-collector output (active low, with voltage output)

Terminal 1: GND

· Insulation walls around all input channel terminals (M3 dia.

screws) · Voltage or temperature measurement settings can be

independently set up for each channel Note: Thermocouple types K, J, E, T, N, R, S, B

· Ten input channels

 ± 100 mV to ± 60 V Voltage

Voltage 1 to 5 V

Thermocouple K, J, E, T, N, R, S, B

-200 °C to 2000 °C

To record 4 - 20mA instrumentation signals, attach a commercially available 250Ω shunt resistance to the input

terminals (between + and -) to convert the signals to 1 - 5 V. Then use the 1-5V or the 10V f.s. input range in the HiLOGGER.

· Supports HIOKI's 2GB Card Note: Non-Hioki CF cards are not supported Save every measurement to CF card in real time. For continuous long-term recording, just insert a CF card with up to a 2 GB capacity. View data on your computer screen using the supplied Logger Utility program.

■ CF Card Data Recording Capacity

- Maximum recording time is inversely proportional to number of recording channels.
 Because the actual capacity of a CF card is less than that indicated, and because the header portion of waveform files is not included in capacity calculations, expect actual maximum times to be about 90% of those in the table.
- "★" Exceeds 365 days.

Measure abrupt load changes, such as those that occur in electric/hybrid vehicles

Isolated, high-speed-sampling data logger

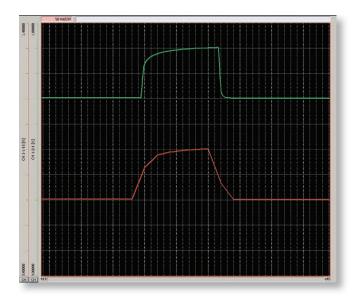

Highlights

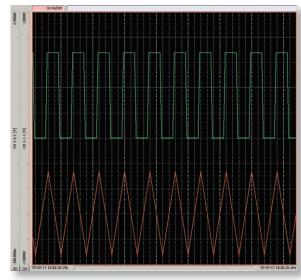

- Fast, 10 ms sampling even while measuring on all channels -
- Measurement circuit includes effective noise suppression -

■ 10 ms Sampling and Recording Across All Channels

Abrupt changes in load need to be measured during development of electrical vehicle systems such as in recent hybrid cars, for which multi-channel, 10 ms sampling is essential. This HiLOGGER can track waveforms that could not be followed with the 100 ms sampling interval previously available.

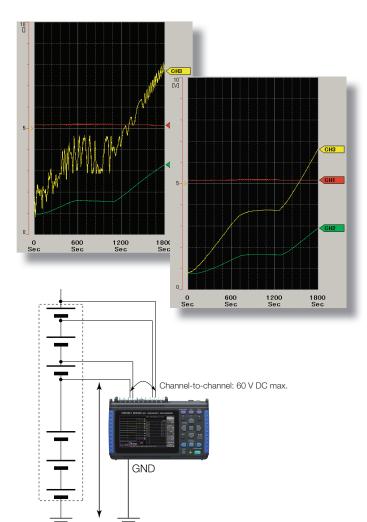

Measurement comparison of 5 Hz square pulse waveform with 10 ms (upper trace) and 100 ms sampling (using the supplied Logger Utility

Enhanced Noise Suppression

Measurement involves the deployment of a deltasigma type A/D converter. Suppress inverter switching noise and line-frequency hum by digital filtering with the HiLOGGER's proprietary oversampling technology.

Note: Optimum noise suppression is obtained for recordings at least two seconds

Channel-to-ground: 60 V DC max.

■ Ten Isolated Analog Input Channels

There's no need to worry about differing potentials of measurement objects when measuring temperature and voltage. All ten analog channels are isolated.

Even when measuring temperature and voltage at the same time, interchannel interference and electric shock hazards are eliminated. The four pulse channels are ideal for counting revolution pulses to measure rotation speed.

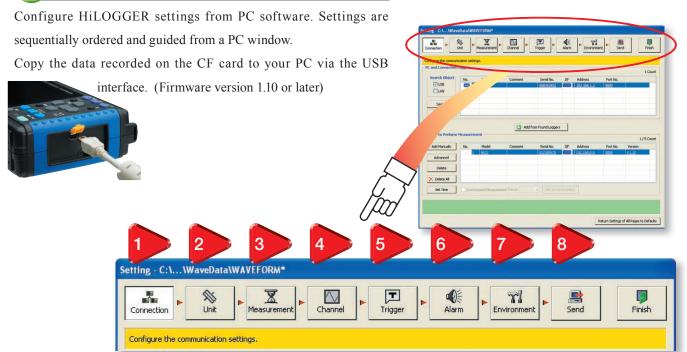

Note: Pulse inputs share common ground.

- Logger Utility program supports multi-channel measurements via PC -
- Bundled with the HiLogger -

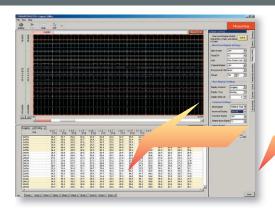

USB connection ensures easy setup

- Logger Utility program supports multi-channel measurements via PC -
- View past measurement data even while measuring -
- Use Windows' printers for hard copy output -

Control measurements from the PC screen

Use the supplied Logger Utility program to control real-time data recording from the PC. Scroll backward through the displayed trend graph window to view past waveforms even while recording.

Up to five **8430-20** HiLOGGERs can be connected to one PC, providing 50 analog and 20 pulse channels that can be graphically displayed together in one window.

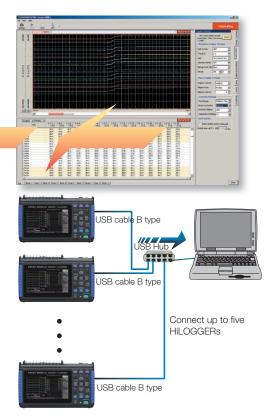

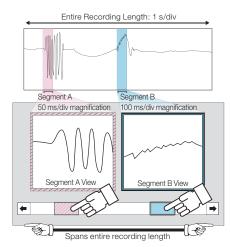

Analyze after measuring

Our new "dual-knob function"* greatly simplifies data analysis. Two different waveform windows are provided, with the displayed waveforms showing different time axis scales (timebases). This capability can greatly simplify long-term data analysis over competitors' offerings.

* Patent pending.

| Logger Utility (bundled application software) | | | | |
|---|--|--|--|--|
| Operating environment | One CD-R, CPU: Pentium 3 (500 MHz or more), at least 512 MB of memory Interface: USB (LAN not available with the Model 8430-20/-21) OS: Windows 2000 (SP4 or later)/ XP (SP2 or later)/ Vista (32-bit/ 64-bit), ((Ver 1.50 or later) Windows 7 (32-bit/ 64-bit) (This software is compatible only to the MEMORY HILOGGER LR8400-20, LR8400-21s, 8423, 8430-20/-21) | | | |
| Real-time data acquisition | Measurements on multiple loggers connected by USB can be controlled to sequentially acquire, display and save waveform data (for recording up to 10 million samples) **LAN not available with the Model 8430-20/-21 Number of controllable instruments: up to 5 units Display: Waveforms (multiple time axis can be displayed), Numerical values (logging), Alarm status at the same time, Numerical value monitoring in a separate window, Waveform scroll while measuring Data saving destination: Real-time data transfer to EXCEL (new function), or Real-time data acquisition file (LUW format, only for HIOKI) Event marks: can be applied while recording | | | |
| Data acquisition settings | Data acquisition settings for the HiLOGGER Saving: The setting for multiple HiLOGGERs can be saved together in one file (LUS format); Instrument configuration settings can be sent and received | | | |
| Waveform display | Processed data file: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format) Display format: Simultaneously display waveform and numerical value, (time-axis divided display possible) Maximum number of channels: 50 channerls (measurement data, used with the 8430-20/-21) + 60 channels (waveform processing data) Others: Waveform display on sheet for each channel, scroll, record event mark, cursor, hard copy, numerical value display | | | |
| Data conversion | Target data: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format), Waveform processing data Converted sections: All data, designation section Format: CSV format (separate by comma, space, tab), transfer to EXCEL spreadsheet, arbitrary data thinning | | | |

| Parameter calculations | Target data: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format), Data acquired in real time, Waveform processing data Calculation items: average, peak, maximum values, time to maximum values, minimum values, time to minimum values, ON time, OFF time, count the number of ON time and OFF time, standard deviation, integration, area values, totalization |
|------------------------|---|
| Search function | Target data: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format), Waveform processing data, Search mode: event mark, time and date, maximum position, minimum position, maximum pole, minimum pole, alarm position, level, window, amount of change |
| Print function | Supported printer: printer compatible with the OS Target data: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format), Waveform processing data Print format: waveform image, report format, list print (channel settings, event, cursor value) Print area: the entire area, area between cursors A and B Print preview: supported |
| Waveform processing | Processing items: Four arithmetic operations Number of processing channels: 60 channerls (Ver 1.20 or later) |

■ Product Specifications

| | ifications (product guaranteed for one year) |
|--|--|
| | Analog inputs: 10 (M3 mm dia. screw terminal block), electrically isolated between channels, and from chassis ground. |
| nput System/ | Input impedance: 1 M Ω (when voltage input or temperature |
| Channels | measuring with thermocouple burn-out detection OFF), $800~k\Omega$ (with thermocouple burn-out detection ON) |
| | Pulse inputs: 4 channels (requires HIOKI Input Cable 9641) |
| | Note: all pulse inputs share common ground with the HiLOGGER Maximum rating: 60 V DC (max. voltage between input terminals |
| | without damage), |
| nalog Inputs | Maximum rated voltage from isolated terminals to ground: 60 V DC (max. voltage between input channel terminals, and from terminals to chassis ground without damage) |
| | Input limits: -5 to +10 V DC (max. voltage between input terminals |
| ulco Inpute | without damage), non-isolated (common ground between pulse input channels, and with chassis) |
| ulse Inputs | Pulse signal characteristic: no-voltage relay contact "a", open collector or voltage input (High: 2.5 V, Low: < 0.9 V), Period: at least 200 w (but high at least 200 w). |
| | least 200 µs (both high and low periods at least 100 µs) One channel, non-isolated: output from external control |
| | connector (common ground) Signal criteria: configurable high/low threshold levels, enter/ |
| | exit threshold window, logical sum (OR) and logical product |
| arm Output | (AND) for every input channel. Output is refreshed each time recording starts. |
| | Signal characteristic: Open-collector output (active low, with |
| | voltage output) Voltage levels: 4.0 to 5.0 V (H) and 0 to 0.5 V (L), |
| | Max. sink current: 5 mA DC, Max. applied voltage: 30 V DC |
| ata Recording | Internal storage: 3.5 MWords (7 MB of two-byte data points, or four-byte pulse measurements) |
| ıpacity | External storage: Up to 2 GB (HIOKI CF cards only) |
| | Waveforms are saved in real time as binary, or CSV data to the |
| eal-Time Data | CF card, and can be saved to separate files at preset times. (CSV data in real-time is 50 msec sampling or later, Firmware Ver. 1.10) |
| aving | Overwriting saving is available. Stored data can be recalled by the HiLOGGER in 3.5 MWord (7 |
| | MB) quantities (for a single channel; less for multiple channels) |
| ackup Function | Backup battery life for clock and settings: approx. 5 years |
| (25°C) | For measurement data: 100 hours with fully charged battery pack, or for as long as AC adapter is connected |
| cternal Control | External Trigger/Event Mark input (exclusion function), Trigger |

Options in Detail

MEMORY HILOGGER 8430-20

(English model)

Supplied Accessories: Instruction Manual × 1, Measurement Guide × 1, Application Disk (Logger Utility program) × 1, USB cable × 1, AC Adapter 9786 × 1, Shoulder Strap × 1, Protection Sheet 9809 × 1

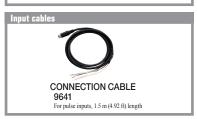

Use only PC Cards sold by HIOKI Compatibility and performance are not guaranteed for PC cards made by other manufacturers. You may be unable to read from or save data to such cards.

(1 GB capacity) PC CARD 512M 9728 (512 MB capacity)

PC CARD 256M 9727 (256 MB capacity)

Related Products

MEMORY HILOGGER LR8400-20

30 isolated analog input channels With built-in VOLTAGE/TEMP UNIT × 2 model

MEMORY HILOGGER LR8401.20

30 isolated analog input channels With built-in UNIVERSAL UNIT × 2 model

MEMORY HILOGGER LR8402-20

30 isolated analog input channels With built-in UNIVERSAL UNIT × 1, VOLTAGE/TEMP UNIT × 1 model

MEMORY HILOGGER 8423

15 to 120 isolated analog channels, with up to 600-channel systems available

Isolated pulse input and alarm output, LAN/USB support, for measuring with a PC

MEMORY HICORDER 8870-20

Dual-channel (isolated) high-speed oscilloscope

Measures (at 1 MS/s) and displays instantaneous AC waveforms up to 280 V

External dimensions are the same as Model 8430-20
